

## The leading trade fair SENSOR+TEST in 2021 exclusively digital

The real exhibition SENSOR+TEST in Nuremberg is canceled. As last year, the world's most important industrial fair for sensor and measurement technology will be held digitally in 2021. From May 4 to 6, 2021, you will meet OptiSense exactly there: in the DIGITAL ARENA of the virtual Sensor + Test 2021. We have already prepared an exciting presentation for you, which you can then follow online in a relaxed way from your (home) office.

*In the digital SMSI lecture by Dipl.-Physiker Georg Nelke, Managing Director and Head of Development at OptiSense, you will learn all about "Design of (optical) sensors for demanding IIOT projects in coating applications".*

Just as in 2020, the worldwide most important industrial fair for sensor and measuring technology will again be held this year digitally. Since in recent months the information exchange over various online channels has functioned very well and was also well accepted, the SENSOR+TEST from 4 to 6 May 2021 will have significantly expanded digital options. This will turn it into a digital event with great benefit for visitors and exhibitors.

On the three days of the trade fair, visitors can expect a plethora of exciting topics dealing with the entire spectrum of measuring technology. In numerous parallel expert forums, interested parties can obtain information on the diverse technologies and

trends. After live talks or video presentations, there will be ample opportunities for a direct exchange and dialog with the experts. And if you missed a topic session, you can just call it up any time later.

In these graduated expert forums, exhibitors will present their novelties and provide information during sessions of various lengths. These sessions can be in-depth knowhow or brief and to the point – it is up to the visitors. The special topic Sensor and Measuring Technology for Condition Monitoring will be suitably dealt with as well.

### **Science will also happen digitally:**

#### **Lecture by OptiSense Managing Director Georg Nelke**

The SMSI 2021 Sensor and Measurement Science International conference (3 – 6 May 2021), planned to be held parallel to the SENSOR+TEST, will concentrate on virtual space. On four days, national and international participants from research, science, and industry will be linked in in a net of four parallel sessions. The SMSI offers a platform for the exchange of the latest research results. Suppliers and users will obtain future-relevant research results.

In the digital SMSI lecture by Dipl.-Physiker Georg Nelke, Managing Director and Head of Development at OptiSense, you will learn all about "Very small (optical) coating thickness sensors for inline applications and their implementations".
